

JOHN BIRNS, ANIMAL COURTESY OF WEST COAST IGUANA RESEARCH

Almost nothing is known about the distribution and natural history of the Guatemalan Black Iguana (*Ctenosaura palearis*). See the Focus on Conservation (facing page).

Populations of critically endangered Ricord's Iguanas (*Cyclura ricordii*) along the southern shore of Lago Enriquillo in the Dominican Republic are threatened by removal of their habitat from the Dominican protected areas system. See article on p. 2.
