

## TABLE OF CONTENTS

### FEATURE ARTICLES

Natural History and Conservation of the Sand Dune Lizard ( <i>Liolaemus multimaculatus</i> )	..... Federico Kacoliris	66
Conservation of Green Anacondas: How Tylenol Conservation and Macroeconomics Threaten the Survival of the World's Largest Snake	..... Jesus Rivas	74
Species Profile: Amazon Treeboa ( <i>Corallus hortulanus</i> )	..... Robert W. Henderson	85
Serpent in the Clouds: Research and Conservation Efforts for the Boelen's Python ( <i>Morelia boeleni</i> )	..... Ari R. Flagle	86
The Little Snake That Could: Butler's Garter Snake in Wisconsin	..... Howard Aprill	94

### PROFILE

Glenn P. Gerber: Doing It His Way	..... Arthur C. Echternacht, Allison C. Alberts, and Gene Gerber	100
-----------------------------------	--	-----

### TRAVELOGUE

Destination Bangladesh: From the Himalayas to the Bay of Bengal	..... Ali Reza	106
---	----------------	-----

### HISTORICAL PERSPECTIVES

The Rattlesnake and Natural Selection	..... N.S. Shaler	115
Use of the Rattles of the Rattlesnake	..... J.G. Henderson	117
The Rattle of the Rattlesnake	..... Samuel Aughey	119

### COMMENTARY

What Do We Lose If We Lose the Frogs?	..... Jeffrey P. Bonner	122
---------------------------------------	-------------------------	-----

### BOOK REVIEW

<i>Biology of the Boas and Pythons</i> by Robert W. Henderson and Robert Powell (eds.)	... Larry David Wilson and Josiah H. Townsend	125
--	---	-----

CONSERVATION RESEARCH REPORTS: Summaries of Published Conservation Research Reports	.....	128
---	-------	-----

NATURAL HISTORY RESEARCH REPORTS: Summaries of Published Reports on Reptilian Natural History	.....	131
---	-------	-----

NEWSBRIEFS	.....	132
------------	-------	-----

OBITUARY: Hy Marx	..... Harold K. Voris and Alan Resetar	135
-------------------	--	-----

IRCF ON THE MOVE	.....	137
------------------	-------	-----

Editorial Information	.....	139
-----------------------	-------	-----

FOCUS ON CONSERVATION: A Project You Can Support	.....	140
--	-------	-----

JOHN BINNS

Critically endangered *Ctenosaura melanosterna* is known only from the Rio Aguan Valley in northern Honduras and Cayos Cochinos off the Caribbean coast of Honduras. Extent of occurrence and area of occupancy are both estimated at less than 100 km<sup>2</sup>. The total population size is not known, but is thought to be fewer than 2,500 mature individuals. The population is severely fragmented, with an estimated 10–15 isolated subpopulations. Main threats to the species are habitat loss and collecting for the international pet trade. A future population decline of at least 30% is probable if current rates of habitat loss continue.
