

VOLUME 15, NUMBER 1

MARCH 2008

# IGUANA

CONSERVATION, NATURAL HISTORY, AND HUSBANDRY OF REPTILES

International Reptile Conservation Foundation

[www.IRCF.org](http://www.IRCF.org)

JOHN BINNS

Although the subspecies is listed as Critically Endangered on the IUCN Red List, very little is known about the Sister Isles Iguana (*Cyclura nubila caymanensis*) on Little Cayman or Cayman Brac. See article on p. 12.

MICHAEL D. KERN

The labyrinthine corridors of Guatemalan markets provide a wealth of cultural artifacts, including textiles, clothes, and statues, along with fruits, vegetables, meat, fish, shoes, and wedding dresses (see *Travelogue* on p. 42).

JOHN BINNS

The Cayman Sister Isles Iguana Project seeks to establish baseline data on the status of *Cyclura nubila caymanensis*, which is endemic to Little Cayman Island and Cayman Brac, and about which very little is known (see article on p. 12).

PHILIP FRANK

Strikingly colored hatchling Ashy Geckos (*Sphaerodactylus elegans elegans*) provide ample rewards to keepers of these tiny, but hardy little lizards (see article on p. 36).

MICHAEL D. KERN

The IRCF is actively engaged in facilitating the conservation of Guatemalan Beaded Lizards (*Heloderma suspectum charlesbogerti*) (see articles on p. 20, 36, and 61).

MICHAEL J. MOREL

American Kestrels (*Falco sparverius*) are diligent hunters of West Indian reptiles; this individual has captured a Puerto Rican Ground Lizard (*Ameiva exsul*) (see article on p. 8).

JOHN BINNS

Ricord's Iguanas (*Cyclura ricordii*) occur only in the most xeric Hispaniolan habitats, where their existence is threatened by human activities (see article on p. 2).
