

Navigating Copyright in Electronic Theses and Dissertations

Gesina A. Phillips, MLIS, MA | Gumberg Library, Duquesne University

Introduction

Graduate students preparing electronic theses and dissertations (ETDs) encounter a broad range of questions related to copyright—both in terms of their use of copyrighted materials and their own status as copyright-holders. This project seeks to ascertain the extent to which these specific needs are addressed in published library literature, and to make recommendations to fill the gaps.

Methods

A survey of the literature related to copyright education by librarians—and in particular copyright education for graduate students working on theses and dissertations—was undertaken in order to ascertain the breadth of the published literature on this topic. Articles related to copyright education were examined in order to determine the extent to which they discussed copyright programs for students, whether or not they differentiated between undergraduate and graduate students, and if so, whether the unique needs of graduate students were discussed.

Trends in the Literature

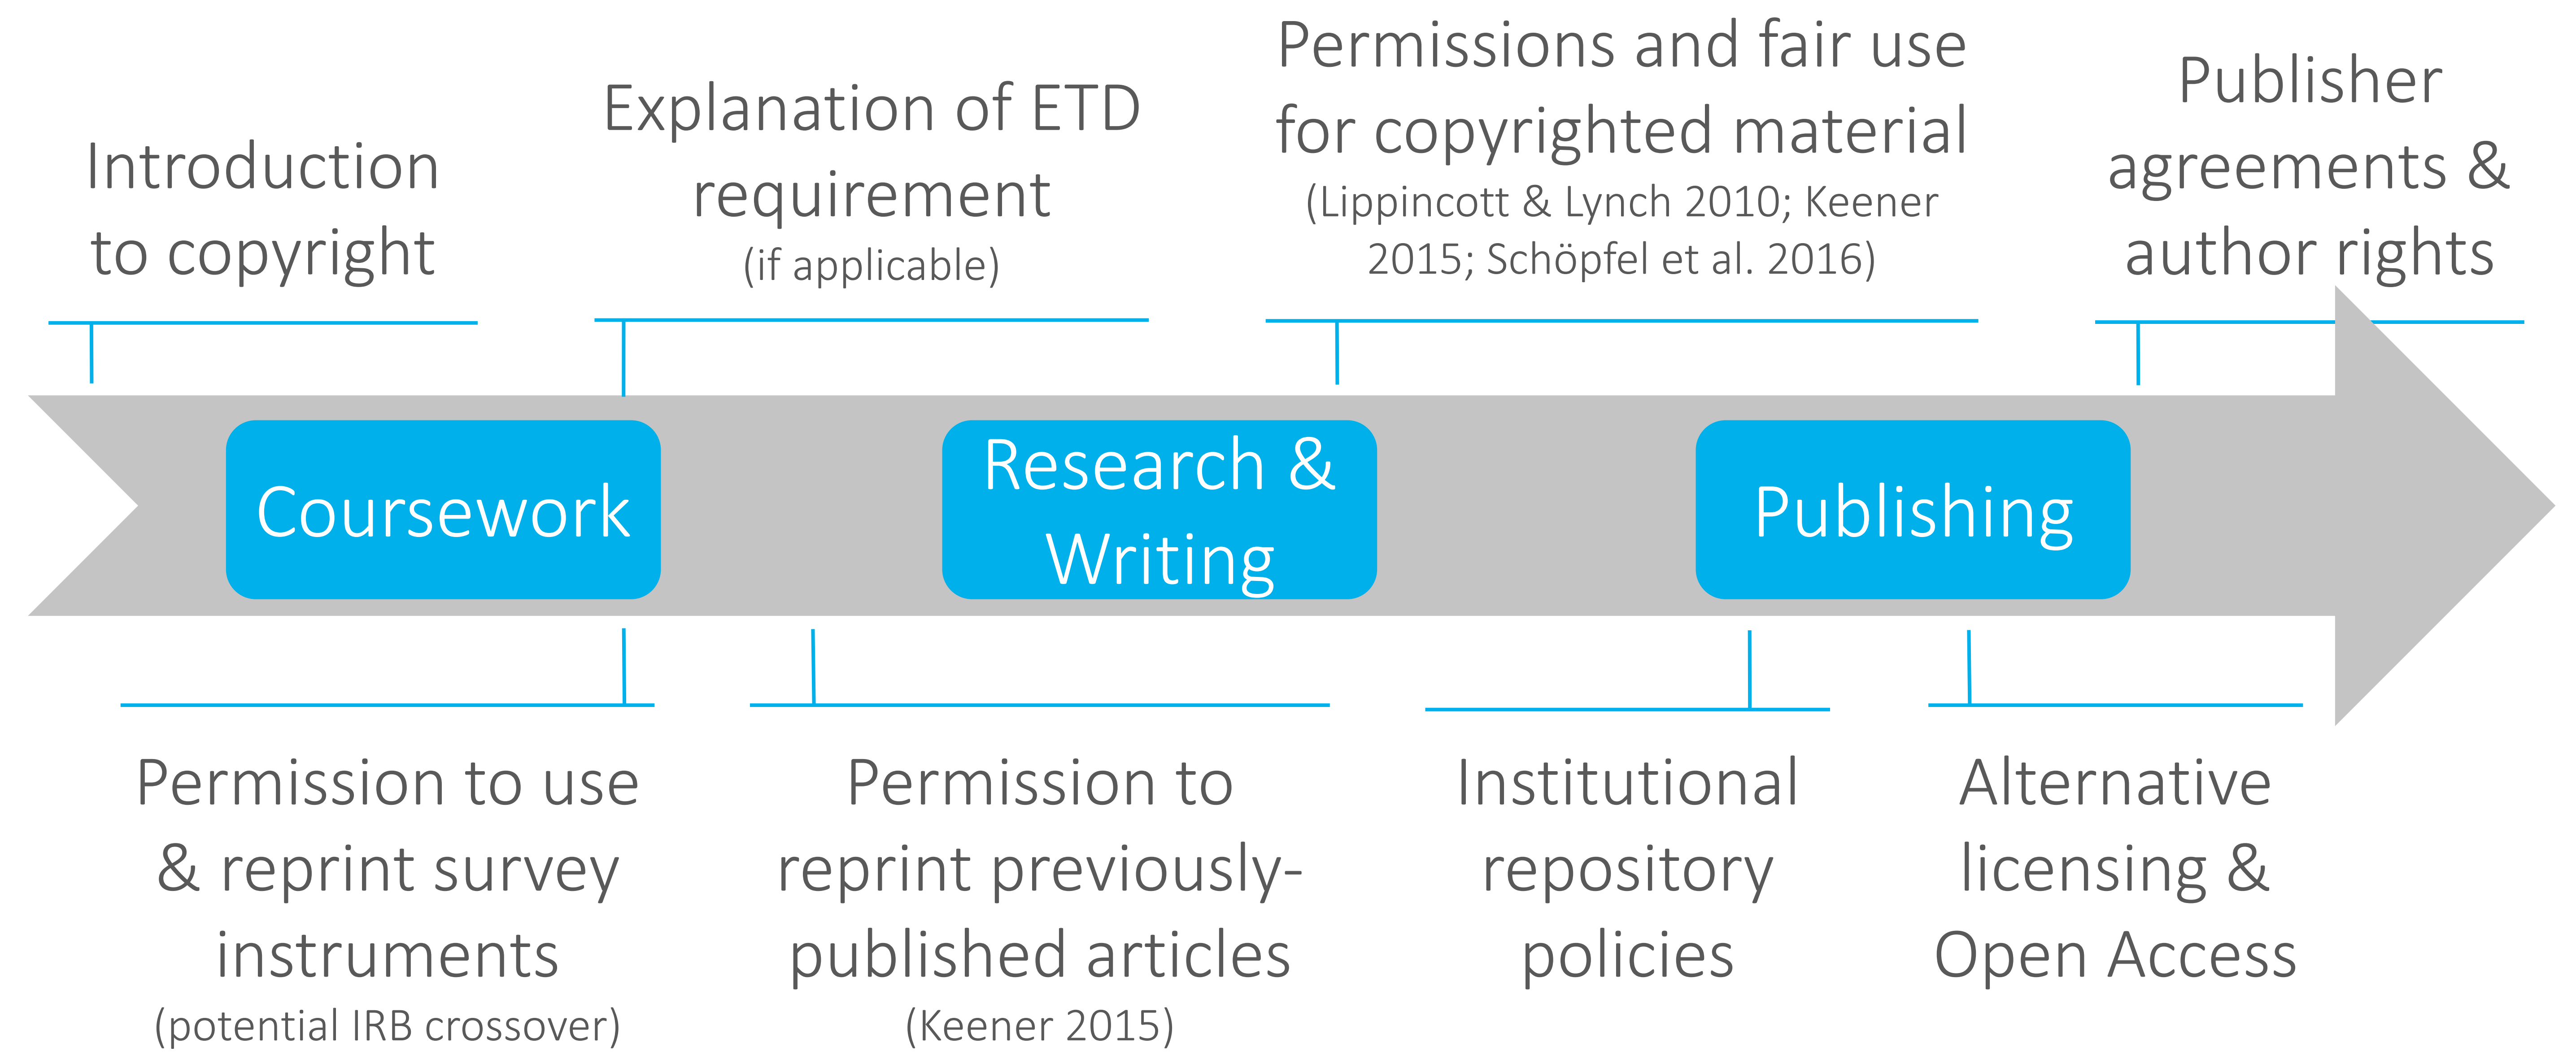

Student interaction with copyright is not the focus:

- Ethical and legal use of content (Nilsson 2016, p. 80)
- Recipients of copyrighted information (Sims 2011)

Undergraduate and graduate students are not differentiated, but student interaction with copyright is explicitly considered:

- Connection between copyright and information literacy education for students (Cheng & Winter 2014; Horava 2010)
- Students included in a discussion of copyright education on campus more generally (Bull & Eden 2014; Quartey 2007; Zerkee 2016)
- Student-held copyright (Conlogue & Christianson 2016, p. 41)

Aligning Copyright Education with the Graduate Student Timeline

Several of the articles identified discussed the needs of graduate students. However, a more thorough examination of educational outreach to this population is called for. The diagram above aligns a generalized graduate student timeline with opportunities for copyright education scaled to the student's needs over time. The specific points of interaction are intentionally left vague in order to describe a process rather than a one-size-fits-all solution.
