

### **Erratum: Should Vitamin D Screening be a Part of Primary Care?**

An error appeared in the August 2011 article, Should Vitamin D Screening be a Part of Primary Care?<sup>1</sup> On page 80, the formula for calculating a loading dose of vitamin D was listed as:

Loading Dose = 100 x (Desired Actual ng/mL of 25-hydroxyvitamin D) x Weight (kg)

The correct formula is as follows:

Loading Dose = 100 x (Desired – Actual ng/mL of 25-hydroxyvitamin D) x Weight (kg)

We regret the error.

Sincerely,

Justin Moore, M.D.

Nalini Reddy Kakulavaram, M.D.
