STUDIES
IN
NATIVE
AMERICAN
LANGUAGES
II

Kansas Working Papers in Linguistics is a regular publication of the Linguistics Graduate Student Association, Department of Linguistics, University of Kansas, Lawrence, KS 66045.

Linguistics Graduate Student Association Officers, 1982-83:

President: Cornelia Paraskevas
Vice President
& Treasurer: Dana Barrager

Aim: *Kansas Working Papers in Linguistics* (KWPL) is intended as a forum for the presentation, in print, of the latest original research by the faculty and students of the Department of Linguistics and other related departments at the University of Kansas. Papers contributed by persons not associated with the University of Kansas are also welcome. The papers published in KWPL may not be reproduced without written permission from the Linguistics Graduate Student Association.

Send all manuscripts and inquiries to:

Editors, KWPL
Department of Linguistics
University of Kansas
Lawrence, KS 66045 USA

Requests for individual volumes should be addressed to Linguistics Graduate Student Association at the above address. Institutions producing a similar publication may request a reciprocal agreement.

The cost per issue for Volumes 1 through 6 and Volume 8, number 1, is US\$4.50 postpaid. The cost for Volume 10, number 1 and Volume 11 is US\$7.50 postpaid. The cost for Volume 7, Volume 8, number 2, Volume 9 and Volume 10, number 2, and Volumes 12 and 13, is US\$10.00 postpaid. Reprints of individual articles may be requested for US\$2.50 postpaid. For orders outside the United States and Canada, please add US\$2 per volume to help defray the costs of postage (a cumulative index to volumes 1-7 can be found at the back of this issue).

We would like to thank the faculty of the Linguistics Department and the Graduate Student Council for their continuing encouragement and support.

THE POSITION OF OPATA AND EUDEVE
IN UTO-AZTECAN

David L. Shaul
University of California, Berkeley

Introduction

The goal of this paper is to discuss the position of the Opata and Eudeve languages within the Uto-Aztecán family, specifically within the subgrouping known as Taracahític,¹ shown in Map 1. Phonological and lexical data will be presented, and then the proposed classifications for Taracahític are discussed with the possibility of shedding light into the prehistory of the State of Sonora.

The Opata (Teguima), Eudeve (Heve, Dohema) and Jova (Jobal, Ova) have remained in a shadowy position in Uto-Aztecán classifications until very recently. Thomas and Swanton (1911:7-8) frequently err in their classifications based on colonial documents, as pointed out by Sauer (1934). Sauer points out that in the *Rudo Essayo*, a contemporary Jesuit author states that Opata and Eudeve are as close as Spanish and Portuguese or as French and Provençal, but that Jova was "very difficult and different from all the languages of the Province" (Sauer 1934:50). Johnson (1950) repeats this passage, as did Pimentel (1874). The latter author grouped Tepiman (see below) and Opata as a single family, probably on the basis of some sound changes that are considered below.

The Opata (Op) and Eudeve (Eu) languages are usually grouped into a Taracahític subfamily of the Uto-Aztecán family along with Guirijio (Gu), Tarahumara (Tr), Yaqui (Yq) and Mayo (My). The inclusion of Tubar (Tu) in this grouping will be attempted below. Kroeber (1934:10) noted that Opata, Yaqui, Mayo, Guarijio and Tarahumara contrast with Tepiman (Pima Bajo, Papago-Pima, Northern Tepehuan, Southern Tepehuan), pointing out that the Tepiman subfamily is so radically different that it cannot be formed into a Sonoran subgroup with Corachol (Cora, Huichol) and Taracahític. Mason (1936; written 1923) groups the Uto-Aztecán (UA) languages of Sonora as Kroeber later did, except that he joined Cora and Huichol into a subfamily, harking ahead to Lamb (L964). The Mason-Kroeber scheme is as follows: Tepiman, Taracahític, Cora/Huichol (Corachol). Lamb (1964:110) maintains Mason's grouping; his internal scheme for Taracahític is as follows in (1).

- (1) Taracahític
 1. Tarahumarish (Tarahumara)
 2. Cahitish (Cahita, Guarijio?)
 3. Opatish (Opata, Jova)

Two UA languages of Sonora are not mentioned (Eudeve, Tubar), and one is

Map 1. Location of Sonoran
Uto-Aztecán

Note that Seri is not Uto-Aztecán.

is misplaced (Guarijo is Tarahumarish), though not without query.

In order to evaluate these statements about the degree or relatedness within the Taracahitic grouping, I collected cognate sets from Voegelin, Voegelin and Hale (1962) and Miller (1967), comparing these data with primary sources (see footnote 1) and adding Opata and Eudeve material. The sound correspondences for these data are discussed below, followed by a synthesis of lexical studies.

Phonological Data

The sound correspondences are treated from the point of view of Proto-UA.² That is, each phoneme posited for UA is traced as it developed in Taracahitic. Initial consonants, medial consonants, vowels and stress patterns are considered. The beginning of such a comparison is found in Kroeber (1934:11), but Eudeve and Tubar are not included. I am particularly indebted to the materials prepared by Lionnet (1978, 1979a) for Tubar and Eudeve.

The languages that have been included in this study are Opata (Op), Eudeve (Eu), Guarijo (Gu), Tarahumara (Tr), Tubar (Tu) and Cahitan (Ca = Yaqui Yq and Mayo My).³ For abbreviations, see footnote 1; for notes on the transcription, see footnote 2. Note that allophones of consonants are compared.

Initial and Medial Consonants

The initial consonant correspondences are given in Table 1. The most interesting changes are series involving labial, labio-velar and glide consonants.

UA **/p/ developed voicing, frication and finally became a glide, as in (2).

(2) p > b > v > w

Gu	Tr	Op	Tu
Ca	Ca	Eu	
	Op	Tu	
	Eu		

The labio-velar UA **/k^w/ developed in two ways as in (3a) and (3b). The second has been described by Langacker (1976).

(3a) k^w > b^w > b > p / — {ⁱ_a}

Tu	Ca	Op	Op
		Eu	Eu

(3b) k^w > g^w > g > ɣ > w / — {^o_e}

Tr and Gu developed /w/ after all vowels. In Ca, **/k^w/ became /b^w/ in all forms in the data except 'coyote'. The development of **/k/ as a labial sound is restricted to Ca, Op, and Eu.

The glide UA **/w/ developed as a nasal, parallel to a continuum first given by Langacker (1976) in only one morpheme in the data set (TWO) as in (4).

(4) w > ~w > ɔ^w > g

Ca	Op
Eu	
Gu	

In 'two', Tr has deleted the /w/ and Tu shows /n^y/.

The UA **/y/ changes systematically, as in (5).

(5) y > n^y ~ n > d

Ca	Tu	Op
Gu		Eu
Tr		

In Tr and Gu, **/k^w/ and **/w/ merged. Op, Eu and Ca exclusively developed **/k^w/ as a labial stop. Tu generally retained **/k^w/, though there is a good amount of allophonic variation. Two changes (**/p/ to /v/ and **/y/ to /d/) separate Eu and Op from Tr, Gu, and Ca. Hence, one may make the following subdivisions on the basis of initial consonants.

- (6) 1. Op-Eu
- 2. Tr-Gu
- 3. Tu
- 4. Ca

It might be preferable to detach Tu. A special relationship between Op-Eu and Ca may be indicated by the development of **/k^w/ as a labial stop in all three.

The correspondences in Table 1 basically hold for the medial consonants in the data. The /p/ to /b/ to /v/ to /w/ series holds; there is much fluctuation between /p/ and /b/ in all varieties, with a development as /v/ only in Op-Eu.

The labio-velar **/k^w/ usually develops in the following way in one morpheme (BREATHE) as in (7).

(7) k^w > b^w > v > w / ___ i

Ca	Eu	Tr
		Gu

In another morpheme (TEARS), one finds the following development.

(8) $k^w > b^w > k \sim p / \underline{\quad} e$

Ca	Tr Op
Gu Eu	

Since only two secure cases of medial $\star\star/k^w/$ development occur in the data, it is not possible to draw any secure conclusions.

The pattern of $\star\star/y/$ to $/n^y/$ to $/d/$ holds.

For the most part, $\star\star/w/$ remained medially. In Ca, $\star\star/w/$ is reflected as a $/b/$ in two forms (EGG, FOREHEAD2), as well as in Eu. In one morpheme (DAY/SUN), $\star\star/k^w/$ is reflected as $/g^w/$.

Medially, a phoneme $/l/$ or $/r/$ developed in southern UA languages from $\star\star/n/$ in some forms in Tepiman and fairly regularly in the rest of the southern languages. Within Taracahitic, Ca and Tu always reflect $/l/$; the others nearly always reflect $/r/$ (but see HARE). Kroeber (1934:19) notes for Eudeve (which he calls Opata), Yq, My, Gu and Tr a single phone [r] which is "tip trilled and devoiced in its progress; r in érat is acoustically almost 1". Thus, the two realizations are phonetically very close.

There are no surprising developments with the medial consonants; this data reinforces the findings for the initial consonants. It has been pointed out several times (Kroeber 1934:10-11; Lionnete 1978; Miller 1980) that the development of a series of voiced stops from a series of glides is found in varying degrees in Taracahitic, while it is a characteristic feature of the neighboring Tepiman subfamily.

(9) $\star\star/k^w/ > /b/$ $\star\star/y/ > /d/$ $\star\star/w/ > /g/$

Tep	Tep	Tep
Op	Op	Op
Eu	Eu	Eu
Ca		Gu

Op and Eu have the entire series, while Gu has one development and Yaqui may be considered to have a different development ($/w/$). It must be noted that the development of $\star\star/w/$ to $/g/$ seems to be lexically conditioned. Nonetheless, Op and Eu must have had a period of intensive interaction with Tepiman at some time in the past.

Vowels and Stress Patterns

The vowels /i e a o u/ remain in all six varieties. These vowels may be inherited from a common Southern UA intermediate ancestor. The vowel /e/ developed from UA $\star\star/\dot{e}/$ in all the southern languages, except Tepiman.

A number of medial consonant variations and variations in the first

vowel may be discussed under the rubric of syllable shape,⁴ but of more importance are stress patterns, seen in Table 2. Toward the south, stress falls on the second syllable or a suffix. This occurs in Tr and Gu (exception: stress on second syllables in verb roots). This usually occurs in Op, Eu and Tu. Stress is always initial in Ca. However, Op and Eu may have initial stress. Heath (1977) points out that stress in UA may have been variable with respect to verb morphology.

It has already been shown that Op and Eu may be grouped together, as may Tr and Gu. Tu may not even belong to Taracahitic. Op-Eu and Ca may be grouped together on the basis of two shared phonological innovations.

- (10) 1. reflection of UA **/k^W/ as a labial stop
- 2. development of initial stress

Although separated from each other by historic times, Op-Eu and Ca may once have been neighbors in a dialect chain. On the other hand, Op-Eu has developed a series of stops from glides, pointing to interaction between Op-Eu and Tepiman.⁵ This latter innovation in O-Eu has been the subject of some speculation about the prehistory of the Tepiman dialect chain and the Taracahitic grouping. I will return to this topic below.

Lexical Data

Swadesh (1955) and Hale (1958, 1959) conducted the first work in UA lexicostatistics. Taken as a relative (rather than precise) chronological indicator when applied within a known family, this early work confirmed the overall classification of Sonoran UA by Mason and Kroeber.

The most recent lexical survey of UA is Miller (1980), who sampled 32 languages for a 107-item list (Hale used 17 languages and the Swadesh 100-item list). Data relevant to Taracahitic is given in Table 3. Tu has more than 50% in common with only one of its neighbors (Ca). Eu shares more than 50% with both Ca and Gu, making them lexically almost as close as Eu's nearest linguistic relative, Op (55% and 57% as compared to 64% between Op-Eu). Op exhibits the same pattern, but to a lesser degree. It is geographically more distant from Ca. This suggests that once Op-Eu was adjacent to Ca and Gu.

A convenient way of checking this situation are cognate splits that occur in the present data. Certain of the cognate sets, such that two or more languages (but not all) share the same lexeme in contrast to the other languages, which usually form a sodality sharing a root that is different from the root that forms the basis of the first grouping. There are three major patterns that emerge from the data, shown in Table 4. One is that Eu and Op form a group by themselves (7/28 = 25%). Op-Eu and Tr-Gu share a number of lexemes in common (4/28 = 14%). The most significant pattern is for Op-Eu and Ca to share one lexeme in contrast to the other (14/28 = 43%). This suggests that the three were once adjacent.

By comparing some of the Taracahitic split cognate data with reconstructed UA forms (Miller 1967) and reconstructed Proto-Tepiman forms (Bascom 1965), it is possible to show that Op-Eu (Opatan) may have had a special lexical relationship to Tepiman that other Taracahitic languages lack. In Table 5, the only six relevant lexical items in the data set are displayed. Only one (CHILE) suggests a special relationship between Tepiman and non-Opatan Taracahitic. The other five show that the Op-Eu forms are in agreement with the reconstructed Tepiman forms, while their semantic equivalents in the other Taracahitic languages do not. This hints at the possibility of Tepiman loanwords into Taracahitic (Miller 1967:22). In two of the items, however, the Tepiman-Opatan forms (BOW, HOUSE) have cognates farther south in Cora, Huichol or Nahuatlán. This suggests that some Tepiman-Opatan lexical sharing could be due to geographic adjacency at an earlier time than when the posited phonological interaction (glides becoming voiced stops) took place between Tepiman and Opatan.

Discussion

In the two preceding sections, it was inferred that Op-Eu and Ca were once contiguous as a part of a Taracahitic dialect chain, and that subsequently Op-Eu and Tepiman were in contact. During this period, Op-Eu developed phonological characteristics of Tepiman. Tepiman loanwords (?) in Op-Eu appear to be lacking in other Taracahitic languages, and the weak development of UA **/w/ to /g/ in Op-Eu (only in two related items: TWO, FOUR) argue for the direction of influence of Tepiman to Opatan. The questions raised here about the prehistory of Sonora have lingered on from the time of Sauer and Kroeber's work on the area (1934). I suggest that Opatan (Op-, Eu) were once next to Cahitan. Then the Tepiman dialect chain split Taracahitic, separating Ca from Opatan. Subsequently, Opatan was in intense contact with Tepiman. Study of Taracahitic morphological systems could shed light on the relation of Opatan to Cahitan. Additional etymological work could test the hypothesis that innovation spread from Tepiman to Opatan lexically and phonologically. It seems clear, though, that Taracahitic, whatever its status as a subfamily within UA, was a dialect chain. It may eventually be possible to correlate linguistic models of Sonoran prehistory with models of the state derived from other prehistory research, notably archaeology. In this regard, the material culture work of Campbell Pennington will be of great help. It should be possible to compare lexemes for cultural specifics among the language groups of the area, looking for patterns which could then be compared to any items of material culture that were found to be markers of distinctive archaeological cultures in the area.

NOTES

1. Abbreviations and sources for the languages are as follows: Opata (Op) Lombardo (1702), Balbastro (n.d.), Johnson (1950); Eudeve (Eu) Loaysa (ca. 1640), Smith (1865), Kroeber (1934) and Escalante H. (1964); Tarahumara (Tr) Brambilla (1976), Hilton (1959), and Lionnet (1970); Guarajio (Gu) Johnson and Weitleiner (1954), Miller (1979); Tubar (Tu) Lionnet (1978); Cahitan (Ca) Collard and Collard (1962), Johnson (1962), and Lindenfield (1973). For a survey of the Uto-Aztecán family, see Lamb (1964), Langacker (1977) and Steele (1979). For materials on Eudeve, see Lionnet (1979b).

2. The following symbols used for transcription here require comment: [c] is a dental to alveolar affricate, [r] is a tap or trill, [v] is a bilabial fricative, glottal stop [?] is rendered as ['], vowel length is indicated by a raised dot [V·], an acute accent indicates stress ['], and [f] follows the usage of Brambilla. Interpretation of documentary sources follows Lionnet (1979a) and Escalante H. (1964) for Eudeve, Lionnet (1978) for Tubar and Escalante H. (1964) for Opata. The critical edition of Loaysa's grammar of Eudeve by Campbell Pennington (1982) will become invaluable in Taracahitic studies.

3. Certain languages of groups of Sonora which may have been Uto-Aztecán or which are grouped with the family on the basis of a few but clear-cut cognates include the following: Tepahue, Tahue, Guasave, Acaxee, Xixime, Ocoroni, Suma, Jumano, Concho, Toboso, Jocome, and Jano. These are sometimes grouped inside Taracahitic, but in the absence of any accurate lexical data, it seems to be the safest position to limit consideration to whether they are Uto-Aztecán or not, and leave the classification there. For a review of this literature, see Sauer (1934), Kroeber (1934), Mason (1936), and Lamb (1964).

4. A number of medial consonant variations appear in the data: /s/ and /r/ (CLOUD, LUNGS), /k/ and /p/ (HEAT), /č/ and k and /kw/ (BUZZARD, EXTINGUISH), /č/ and /t/ and /c/ (SIT sg.), /č/ and /s/ (SLEEP). These may be of interest in a broader framework of research or in probing Taracahitic in depth. A number of vowel alternations in the first vowels are found in the data: /e/ to /i/ is common with the location of stress on the final syllable or suffix. There is a variation of /i/ and /u/ (DOG, FISH, ANT), /e/ and /a/ (in ten stems), /i/ and /e/ (BITE, DREAM, DRINK), and /a/ and /o/ (LUNGS). In a number of cases, a diphthong /ai/ was produced in Opata from medial /h/-loss, changing into /ei/ in Eu: UA **pahi 'three' became Op pai and Eu pei.

5. It has been suggested by Miller (1930:41-42) that the development of a voiced series of stops from glides may reflect borrowing by the Tepimans, with Taracahitic being the source(s) of the variation. However, the fact remains that only Op-Eu and Tepiman have the complete

series. Further, within Taracahitic, only Op-Eu has the complete series. Opatan has the essential development of **/y/ to /d/ everywhere the change is applicable in the data set. It is the only Taracahitic language exhibiting this change. Thus, whatever the direction of influence, Op-Eu and Tepiman underwent a period of mutual contact during which time both speech communities maximized this series of sound changes.

6. The terms Tepiman is adopted after Bascom (1965) and Corachol follows current usage among Uto-Aztecans. Both terms give an idea of the constituencies involved, while the corresponding terms proposed by Lamb (Pimic for Tepiman, Coric for Corachol) do not.

Table 1. Initial Consonants in Taracahitic

UA	Op	Eu	Tr	Gu	Tu	Ca
p	b, v	b, v	b, p	p	v, w	p
t	t	t, r	f, r	t	t	t
k	k	k	k, g	k	k	k
k ^w	g, b, p	b, b, p	w	w	k ^w , k ^v	b ^w
c	č, c	č, c	č	č	c	č
m	m	m	m	m	m	m
n	n	n	n	n	n	n
s	s, č	s, c	s	s	s	s
w	w	w	w	w	w	w
y	d	d	y	y	n, ny	y
?	?	?	?	?	?	?
h	h, Ø	h, Ø	h, Ø	h, Ø	h, Ø	h, Ø

Notes.

1. **/p/ remains /p/ in two items (BLOW, HARE).
2. **/t/ to /r/ in Eu occurs in only two forms (HAWK, WE).
3. **/c/ is sporadically reflected as /t/.
4. **/k^w/ is sporadically reflected as /w/ in Ca.
5. **/n/ to /ny/ in Tu occurs in only one item (FLY verb).
6. **/c/ remains /c/ allophonically in Op, Eu and Tu.
7. **/w/ becomes /g/ in only tow stems (TWO, FOUR).
8. Voicing of original stops is restricted largely to Tr.

TABLE 2. Stress Patterns

1. $v : \overset{(v)}{v} : \left\{ \begin{matrix} \overset{(v)}{v} \\ v? \end{matrix} \right\} : \left\{ \begin{matrix} v? \\ vh \\ v?v \end{matrix} \right\} : v : \acute{v}cc$
2. $v : \left\{ \begin{matrix} vv \\ v \end{matrix} \right\} : v : v : v : \acute{v}$
3. $\left\{ \begin{matrix} vv \\ v \end{matrix} \right\} : \left\{ \begin{matrix} vv \\ v \end{matrix} \right\} : v : \left\{ \begin{matrix} vv \\ v?v \end{matrix} \right\} : \left\{ \begin{matrix} vv \\ v \end{matrix} \right\} : \acute{vv}$
4. $v : \overset{(v)}{v} : \left\{ \begin{matrix} v \\ v? \end{matrix} \right\} : vh : \acute{v} : \left\{ \begin{matrix} vv \\ v \end{matrix} \right\}$
5. $v : \left\{ \begin{matrix} \acute{vv} \\ v \end{matrix} \right\} : v? : \overset{(v)}{v} : v : \acute{v?v}$
6. $v : \overset{(v)}{v} : v : v : v : \left\{ \begin{matrix} v?v \\ vv \end{matrix} \right\}$

Notes

1. The order given is: Op, Eu, Tr, Gu, Tu, Ca.
2. VV indicates a long vowel; CC indicates a long consonant.

Table 3. Lexical Data (After Miller 1980)

	Op	Eu	Gu	Tr	Tu	Ca
Op	--	64	50	46	39	49
Eu		--	55	49	48	57
Gu			--	79	48	58
Tr				--	43	50
Tu					--	51

Note

1. Figures are percentages of lexical sharing of a 107-item sampling list.

Table 4. Cognate Splits in Taracahitic

GROUP I: Op-Eu vs. Tr-Gu-(Tu)-Ca

Notes

1. Abbreviations: Ca Cahitan, Cr Cora, Eu Eudeve, Gu Guarijio, Hch Huichol, Hp Hopi, Nah, Náhuatl(an), Num Numic subfamily, Op Opata, Sr Serrano, Tak Takic subfamily, Tb Tübatlalabal, Tep Tepiman subfamily, Tr Tarahumara, Tu Tubar, UA Uto-Aztecán.
2. In EARTH, Tepiman should reflect **/y/, not **/t/.
3. Miller (1967:22) suggested that BOW may have been borrowed into Taracahitic from Tepiman.

APPENDIX: Data Set

- Notes:
1. Abbreviations: Ca Cahitan or Cahuilla (Cahuilla in distributions of UA forms given in parentheses after a UA citation), Cr Cora, Eu Eudeve, Gu Guarijio (Varihio), Hch Huichol, Hp Hopi, Mn Mono, My Mayo, Nah Náhuatl(an), NT Northern Tepehuan, Num Numic subfamily, Op Opata, Pg Papago, pl plural, Pn Panamint, re reference, sg singular, SP Southern Paiute, Sr Serrano, ST Southern Tepehuan, Tak Takic subfamily, Tb Tübatlalabal, Tep Tepiman subfamily, Tr Tarahumara, Tu Tubar, Yq Yaqui, UA Uto-Aztecán.
 2. This data set is not meant as a definitive treatment of Taracahitic.
 3. Opata and Eudeve forms are cited in the original spelling and in transcription.
 4. Tubar forms are cited in Lionnet's transcription.
 5. Cahitan (Yq, My) long vowels are written as VV.
 6. Morpheme boundaries have been inserted as a dash (-) in citations.
 7. Long consonants have been written as CC.
 8. Cahitan forms always have stress in the first syllable.

- AFFINE Op monigua, monégua-t [moní-wa], Eu mon 'son or daughter-in-law', Tr mo'né, Tu moa-sakár [mo a], Ca mo'one 'son-in-law', UA M505 *mona (SP, Hp, Yq, Cr, Nah)
