

The New Science of Reptile Substrates

Welcome to the new science of reptile substrates. In the past, a reptile substrate was considered a litter; merely a convenient way to dispose of reptile waste. CaribSea's "Blue Iguana" line recognizes a substrate to be the primary factor in creating a specialized environment tailored to the

needs a specific types of reptiles. A substrate may supplement an animals mineral needs, or humidify its surroundings and determine the pH of the physical environment. A substrate can also be utilized to biologically reduce toxic animal waste to make a cleaner substrate in between changing. Your reptile probably spends most of his life in physical contact with the substrate that you provide. Shouldn't it be the best?
